

THE ENGINEER'S CODE 2026 — TECHNICAL MODULES

OVERVIEW

SENTEC, NED University of Engineering and Technology

# 2 AGENT SPRINT: LIVE GMAIL AUTOMATION	
What To Do	Build an agent that reads real emails from a provided Gmail account, classifies them, drafts policy-based replies, and displays live status on a dashboard.
Description	Each team receives a dedicated test Gmail account with sample complaint emails. The agent must fetch, classify, draft replies (saved as drafts, not auto-sent), and flag escalations. Judges inject unseen emails, including one deliberately unusual case, during live evaluation.
Tools	Gmail API (google-api-python-client); OAuth2 (google-auth-oauthlib); Python; LangChain (optional); Streamlit or Google Sheets for the dashboard
